Preface

The *County and City Data Book* (CCDB), published intermittently since 1944, is a local area supplement to the *Statistical Abstract of the United States*. This 2007 edition is the fourteenth in the series. The first edition featured city data only; the second, in 1947, county data only. Beginning with the third edition in 1949, the book was redesigned to include both county and city data and renamed the *County and City Data Book*. Subsequent editions were published in 1952, 1956, 1962, 1972, 1977, 1983, 1988, 1994, and 2000.

The *County and City Data Book* is a convenient summary of statistics on the social and economic structure of the counties and cities of the United States. It is designed to serve as a statistical reference and guide to other data publications and sources. The latter function is served by the source citations appearing below each table and Appendix A, Source Notes and Explanations.

This volume includes a selection of data from many statistical publications and electronic sources, both government and private. Publications and Internet sites listed as sources usually contain additional detail and more comprehensive discussions of definitions and concepts than can be presented here. Data not available in publications issued by the contributing agency but obtained from unpublished records are identified in the source notes as “unpublished data.” More information on the subjects covered in the tables so noted may generally be obtained from the source.

Although emphasis in this publication is primarily given to county and city data, Table A includes U.S. and state totals.

Statistics in this edition—Data are generally shown for the most recent year or period available by spring of 2007.

States—Data are presented for the United States, the 50 states, and the District of Columbia. 188 data items are presented for these areas in 15 tables, A-1 through A-15. The states and the District of Columbia are presented in alphabetic order under the U.S. total.

Counties—Data are presented for 3,141 counties and county equivalents defined as of February 22, 2005, as well as the United States, the 50 states, and District of Columbia. 188 data items are presented for these areas in 15 tables, B-1 through B-15. The counties and county

equivalents are presented in Federal Information Processing Standards (FIPS) code order, which lists counties alphabetically under their respective states; independent cities in Maryland, Missouri, Nevada, and Virginia are listed alphabetically at the end of the respective county listing.

Cities—Data are presented for states and the 1,265 incorporated places with 25,000 or more population as of April 1, 2000. Two census designated places (CDPs) are also included (Honolulu CDP in Hawaii and Arlington CDP in Virginia). 82 data items are presented for these areas in six tables, C-1 through C-6. The cities and CDPs are presented in FIPS code order, which lists these areas alphabetically under their respective states.

Places—Table D comprises six individual tables with 79 items of data. These tables present data for states and 242 incorporated places of 100,000 or more population as of April 1, 2000, in all states except Hawaii, which has no incorporated places recognized by the U.S. Census Bureau. Two CDPs are also included (Honolulu CDP in Hawaii and Arlington CDP in Virginia).

Statistical reliability and responsibility—The contents of this volume were taken from many sources. All data from either censuses and surveys or from administrative records are subject to error arising from a number of factors: sampling variability (for statistics based on samples), reporting errors in the data for individual units, incomplete coverage, nonresponse, imputations, and processing error. The Census Bureau cannot accept the responsibility for the accuracy or limitations of the data presented here, other than those for which it collects. The responsibility for selection of the material and for proper presentation, however, rests with the Census Bureau.

Maps—For a map of the United States with the 50 states and the District of Columbia, as well as census regions and divisions, see the inside of the front cover. Maps of all 50 states and the District of Columbia showing county and metropolitan area boundaries and names, as well as the locations of incorporated places of 25,000 or more population, can be found in Appendix D.

Appendixes—Appendix A presents a discussion of source notes and explanations for the data items in Tables A through D. Appendix B presents a discussion of the limitations of data and methodology. Appendix C presents a discussion of the geographic information relevant to this volume, as well as the current definitions for metropolitan areas. Appendix D is a set of state maps with county and

metropolitan area boundaries and names, as well as locations of incorporated places of 25,000 or more population. Appendix E is a guide to subjects by geographic area.

For additional information on data presented—

Please consult the source publications available in local libraries, write to the agency indicated in the source notes, or visit the Internet site listed. Contact the Census Bureau only if it is cited as the source.

Statistics for the nation—Extensive data at the national level can be found in the *Statistical Abstract of the United States: 2007*, an annual national data book, released each fall. Several editions of this publication are available on the Internet at <<http://www.census.gov/compendia/statab>>.

USA Statistics in Brief, a pocket-size pamphlet highlighting many statistical series in the *Abstract*, is available separately; single copies of this pamphlet can be obtained free from U.S. Census Bureau, Customer Services Center, Washington, DC 20233 (telephone 301-763-4636).

Statistics for states and metropolitan areas—Data for states and metropolitan areas may be found in the *State and Metropolitan Area Data Book: 2006*; available in print or on the Internet at <<http://www.census.gov/compendia/smadb/>>.

Additional statistics for counties—While this book contains approximately 188 data items for all counties and county equivalents in the United States, an extensive county database featuring over 6,000 data items for these areas can be found in USA Counties on the Internet at <<http://censtats.census.gov/usa/usa.shtml>>.

Suggestions and comments—Users of the *County and City Data Book* and related publications (see inside back cover) are urged to make their data needs known for consideration in planning future editions. Suggestions and comments for improving coverage and presentation of data should be sent to the Director, U.S. Census Bureau, Washington, DC 20233.

Headnotes immediately below table titles provide information on the geographic areas presented in the table.

Unit indicators show the specified quantities in which data items are presented. They are used for two primary reasons. Sometimes data are not available in absolute form.

Other times we round the numbers in order to save space to show more data, as in the case above.

If no unit indicator is shown, data presented are in absolute form (see Table B-5 for an example). When needed, unit indicators are found in the column or spanner headings for the data items as shown above.

Example of Unit Indicator Interpretation From Table

Geography or area	Year	Item	Unit indicator	Number shown	Multiply by
UNITED STATES	2005	Personal income	(mil. dol.)	10,220,942	\$1,000,000

To Determine the Figure it Is Necessary to Multiply the Number Shown by the Unit Indicator:

$$\text{Personal income, 2005} = 10,220,942 * 1,000,000 \text{ or } 10,220,942,000,000 \\ \text{(over 10 trillion dollars)}$$

In many tables, details will not add to the totals shown because of rounding.

EXPLANATION OF SYMBOLS AND TERMS

The following symbols are used in the tables throughout this book:

- Represents zero.
- B Base figure too small to meet statistical standards for reliability of a derived figure.
- D Data withheld to avoid disclosure pertaining to a specific organization or individual.
- NA Data not enumerated, tabulated, or otherwise available separately.
- S Figure does not meet publication standards for reasons other than that covered by symbol B, above.
- X Not applicable.
- Z Entry would amount to less than half the unit of measurement shown.

The following terms are also used throughout this publication:

Averages. An average is a single number or value that is often used to represent the “typical value” of a group of numbers. It is regarded as a measure of “location” or “central tendency” of a group of numbers.

The *arithmetic* mean is the type of average used most frequently. It is derived by summing the individual item values of a particular group and dividing the total by the number of items. The arithmetic mean is often referred to simply as the “mean” or “average.”

The *median* of a group of numbers is the middle number or value when each item in the group is arranged according to size (lowest to highest or *visa versa*); it generally has the same number of items above it as well as below it. If there is an even number of items in the group, the median is taken to be the average of the two middle numbers.

Rates. Rate is a quantity or amount of an item measured in relation to a specified number of units of another item. For example, unemployment rate is the number of unemployed persons per 100 persons in the civilian labor force. Examples of other rates found in this publication include birth rate, which is the number of births per 1,000 population; infant death rate, the number of infant deaths per 1,000 live births; and crime rate, which is the number of serious offenses per 100,00 population.

A *per capita* figure represents a specific type of rate computed for every person in a specified group (or population). It is derived by taking the total for a data item (such as income, taxes, or retail sales) and dividing it by the number of persons in the specified population.

Major Federal Data Contacts

To help *County and City Data Book* users find more data and information about statistical publications, we are issuing this list of contacts for federal agencies with major statistical programs. The intent is to give a single, first-contact point of entry for users of statistics. These agencies will provide general information on their statistical programs and publications, as well as specific information on how to order their publications. We are also including the Internet (World Wide Web) addresses for many of these agencies. These URLs were current in May 2007.

¹Federal Information Processing Standards (FIPS) codes for states and counties.

²Based on 50 states. When states share the same rank, the next lower rank is omitted.

³The Population Estimates base reflects modifications to the census population as documented in the Count Question Resolution program and geographic program revisions. 1990 also has adjustment for underenumeration in certain counties and cities.

⁴Persons per square mile was calculated on the basis of land area data from the 2000 census.

Survey, Census, or Data Collection Method: Based on population estimates and the "component of population change method"; for more information, see Appendix B, Limitations of the Data and Methodology, and also <<http://www.census.gov/popest/topics/methodology/>>.

NA Not available. X Not applicable. Z Less than .05 persons per square mile.

¹Federal Information Processing Standards (FIPS) codes for states and counties.

²Based on 3,141 counties/county equivalents. When counties share the same rank, the next lower rank is omitted.

³The Population Estimates base reflects modifications to the census population as documented in the Count Question Resolution program and geographic program revisions. 1990 also has adjustment for underenumeration in certain counties and cities.

⁴Based on 3,140 counties/county equivalents. When counties share the same rank, the next lower rank is omitted.

⁵Persons per square mile was calculated on the basis of land area data from the 2000 census.

⁶Yakutat City and Borough, AK, included with Skagway-Hoonah-Angoon Census Area.

⁷Yellowstone National Park County became incorporated with Gallatin and Park Counties, MT; effective November 7, 1997.

⁸Clifton Forge independent city became incorporated with Alleghany County, VA; effective July 1, 2001.

⁹South Boston independent city became incorporated with Halifax County, VA; effective June 30, 1995.
